

Abstract

5 The gas sensor module of the invention includes: A primary sensor
for the registering of a gas concentration; a digital data memory for
storing sensor data or process data; and an interface for connecting
to a superordinated unit for energy supply of the gas sensor module
and for data exchange between the gas sensor module and the
superordinated unit, with the interface being a contactless interface.

10 The transmitter module of the invention for operating at least one
such gas sensor module includes: A contactless interface for data
exchange with the gas sensor module and for energy supply to the
gas sensor module; and a communications circuit for output of at
least one signal dependent on the measured data.
